

no measurement inside loops
S: pair-run switches

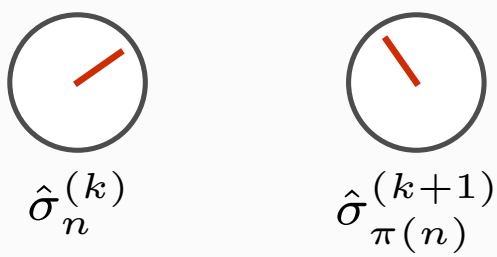

entangled at the first joint application

steering test

random MUB n

steering parameter $\mathcal{S}_N$

(N mutually unbiased settings)

quantum bound $\mathcal{S}_N \leq N$

loop decoherence (strong loss)

$\mathcal{S}_N > \sqrt{N}$:
steerable; no EB
product mixture

$\mathcal{S}_N \leq \sqrt{N}$:
nothing
certified
